**ALL VACCINATION PROGRAMS SHOULD BE DEVELOPED IN CONSULTATION WITH A LICENSED VETERINARIAN**

**CORE VACCINATIONS** protect against diseases that are endemic to a region, are virulent/highly contagious, pose a risk of severe disease, those having potential public health significance, and/or are required by law. Core vaccines have clearly demonstrable efficacy and safety, with a high enough level of patient benefit and low enough level of risk to justify their use in all equids.

</tbody>
</table>

***Due to the relatively long duration of immunity, this vaccine may be given post-foaling but prior to breeding and thus reduce the number of vaccines given to a mare pre-partum.
**RISK-BASED VACCINES** are selected for use based on risk assessment** performed by, or in consultation with, a licensed veterinarian. Use of these vaccines may vary between individuals, populations, and/or geographic regions. Note: Vaccines are listed in this table in alphabetical order, not in order of priority for use.

**Refer to “Principles of Vaccination” in main document for criteria used in performing risk assessment.**

</table>
| Anthrax | Not recommended during gestation | Annual | 2-dose series  
2nd dose 3-4 weeks after 1st dose.  
Annual revaccination. | Do not administer concurrently with antibiotics.  
Use caution during storage, handling and administration. Consult a physician immediately if human exposure to vaccine occurs by accidental injection, ingestion, or otherwise through the conjunctiva or broken skin. |
| Botulism | Previously vaccinated:  
Annual, 4 - 6 weeks pre-partum  
Previously unvaccinated or having unknown vaccination history:  
3-dose series  
• 1st dose at 8 months gestation.  
• 2nd dose 4 weeks after 1st dose.  
• 3rd dose 4 weeks after 2nd dose. | Annual | 3-dose series  
• 2nd dose 4 weeks after 1st dose.  
• 3rd dose 4 weeks after 2nd dose.  
Annual revaccination | |
| **Equine Herpesvirus (EHV)** | **3-dose series** with product labeled for protection against EHV abortion. Give at 5, 7 and 9 months of gestation. | Annual (see comments) | **3-dose series**  
- 2nd dose 4-6 weeks after 1st dose.  
- 3rd dose 4-6 weeks after 2nd dose. | Consider 6-month revaccination interval for:  
- Horses less than 5 years of age.  
- Horses on breeding farms or in contact with pregnant mares.  
- Performance or show horses at high risk. |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------|---------------------|------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| **Equine Viral Arteritis (EVA)** | Not recommended unless high risk. | Annual  
*Stallions, teasers:* Vaccinate 2 - 4 weeks before breeding season.  
*Mares:* Vaccinate when open. | Single dose (See comments) | **Prior to initial vaccination,** intact males and any horses potentially intended for export should undergo serologic testing and be confirmed negative for antibodies to EAV. Testing should be performed shortly prior to, or preferably at, the time of vaccination. |
| **Influenza** | **Previously vaccinated:**  
*Inactivated vaccine:* Semi-annual with one dose administered 4 - 6 weeks pre-partum.  
*Canary pox vector vaccine:* Semi-annual with one dose administered 4 - 6 weeks pre-partum.  
**Previously unvaccinated or having unknown vaccination history:**  
*Inactivated vaccine:* 3-dose series  
- 2nd dose 4 - 6 weeks after 1st dose.  
- 3rd dose 4 - 6 weeks pre-partum.  
*Canary pox vector vaccine:* 2-dose series  
- 2nd dose 4 - 6 weeks after 1st dose but no later than 4 weeks pre-partum | Horses with ongoing risk of exposure: Semi-annual.  
Horses at low risk of exposure: Annual. | **Modified live vaccine:**  
Single dose administered intranasally.  
Revaccinate semi-annually to annually.  
**Inactivated vaccine:** 3-dose series  
- 2nd dose 4 - 6 weeks after 1st dose.  
- 3rd dose 3 - 6 months after 2nd dose.  
Revaccinate semi-annually to annually.  
**Canary pox vector vaccine:** 2-dose series  
2nd dose 4 - 6 weeks after 1st dose.  
Revaccinate semi-annually. |
### Potomac Horse Fever (PHF)

- **Previously vaccinated:** Semi-annual, with one dose given 4 - 6 weeks pre-partum.
- **Previously unvaccinated or having unknown vaccination history:**
  - 2-dose series
    - **1st** dose 7-9 weeks pre-partum.
    - **2nd** dose 4-6 weeks pre-partum.

### Rotavirus

- 3-dose series
  - **1st dose** at 8 months gestation.
  - **2nd and 3rd doses** at 4-week intervals thereafter.

### Strangles *Streptococcus equi*

- **Previously vaccinated:**
  - **Killed vaccine containing M-protein:** Semi-annual with one dose given 4 - 6 weeks pre-partum.
- **Previously unvaccinated or having unknown vaccination history:**
  - **Killed vaccine containing M-protein:** 3-dose series
    - **2nd** dose 2 - 4 weeks after 1st dose.
    - **3rd** dose 4 - 6 weeks pre-partum.

### Vaccination Protocols

**Potomac Horse Fever (PHF):**
- Semi-annual to annual
- 2-dose series
  - **2nd** dose 3-4 weeks after **1st** dose.
  - Semi-annual or annual booster

**Rotavirus:**
- Not applicable

**Strangles *Streptococcus equi*:**
- Semi-annual to annual
- **Killed vaccine containing M-protein:** 2-3 dose series
  - **2nd** dose 2 - 4 weeks after 1st dose.
  - **3rd** dose (where recommended by manufacturer) 2 - 4 weeks after **2nd** dose.
  - Revaccinate semi-annually.
- **Modified live vaccine:** 2-dose series administered intranasally.
  - **2nd** dose 3 weeks after **1st** dose.
  - Revaccinate semi-annually.

A revaccination interval of 3 - 4 months may be considered in endemic areas when disease risk is high.

Vaccinations for Adult Horses developed by the American Association of Equine Practitioners Infectious Disease Committee, 2008.
