

## Alltech FEI World Equestrian Games Green Initiatives

**Composting and recycling programs will reduce the trash output from this year's event.**

September 4, 2010

The Alltech FEI World Equestrian Games is proud to announce plans for efficient recycling and waste reduction during the 16-day event, with Green Duck composting and recycling solutions company.

Using eco-stations and compostable products, the World Games 2010 Foundation is projected to recycle and compost over 360 tons of material that otherwise would have gone to the landfill.

Volunteers will be on hand at the eco-station sites to assist spectators in where to place their disposables. These bins will be designated for recyclables, compostables and waste materials.

Additionally, Green Duck has partnered with Buona and Patina, the Games concession and catering vendors, to utilize certified compostable to-go food service packaging, including plates, cups, cutlery and food containers. With these compostable products in place, more than 90 percent of the packaging for foodservice will be diverted from the landfill, and instead be turned into nutrient-rich compost soil.

“Green Duck is excited and proud to be a part of greening the Alltech FEI World Equestrian Games. We look forward to the event in addition to greatly reducing the amount of waste generated through recycling and composting,” said Jocelyn Tice, founder of Green Duck.
