

## Sore-footed Horses can Slip into This

**Create a custom hoof boot right from your home.**

04-27-2007

EasyCare has developed a new hoof boot system that allows anyone to custom design a horse boot. This should make the old style of horse boot—the one that bloodied your knuckles and then refused to come off the hoof—obsolete. With the new custom boot, you're able to choose the fastening system, pick the tread pattern, back strap system and designate the size to create a boot that's right for your horse. Each boot also comes with the Easyboot Gaiter attached.

Want to give the new design system a whirl? The Easyboot Custom can be built and ordered using the interactive boot builder module on the EasyCare website: <http://www.easycareinc.com/custom.aspx>
